CAREER OBJECTIVE

Detail-oriented Computer Engineering graduate specializing in Data Engineering, ETL/ELT pipelines, and cloud-based data platforms. Skilled in Python, SQL, PySpark, AWS, Databricks, and Snowflake, with hands-on experience building scalable data pipelines and transforming raw data into reliable, analysis-ready datasets. Seeking a Data Engineer role to contribute to data-driven decision-making and robust data infrastructure.

EDUCATION

Pravara Rural Engineering College, Loni Bachelor of Engineering — Computer Engineering CGPA: 8.14	2021 – 2025
R. B. Narayanrao Borawake College, Shrirampur HSC — Class XII Percentage: 86.50%	2019 – 2021
Pravara Kanya Vidya Mandir, Loni SSC — Class X Percentage: 84.60%	2019

SKILLS

- **Languages:** Python, SQL, Java
- **Data Engineering:** Data Modeling, Data Warehousing, ETL/ELT Pipelines, Data Ingestion, Data Transformation & Cleaning, Data Validation, Data Quality
- **Big Data:** PySpark, Apache Spark, Databricks
- **Cloud (AWS):** Amazon S3, AWS Glue, AWS Lambda, AWS IAM, AWS SNS, AWS SQS
- **Data Warehouse:** Snowflake, Snowpipe, Streams, Stages
- **Databases:** MySQL, PostgreSQL
- **Development Tools:** REST APIs, Spring Boot, Git, GitHub
- **Data Visualization:** Tableau

PROFESSIONAL EXPERIENCE

Data Engineer, DeviceMotion Technologies, Pune	Feb 2026 – Present
• Develop Python and SQL-based data-processing workflows for structured and semi-structured datasets. • Build and maintain ETL workflows covering data ingestion, validation, transformation, and downstream preparation. • Process data using Python, SQL, PySpark, Apache Spark, and Databricks across CSV, JSON, and Parquet formats. • Work with AWS cloud services, including Amazon S3 and AWS Glue, for cloud-based data processing and pipeline workflows. • Analyze source datasets, identify data-quality issues, and apply transformation and validation logic to prepare reliable datasets. • Use Git and GitHub for source-code management and collaborative development.	
Software Developer, Orion Techno Solutions	Aug 2025 – Dec 2025
• Developed backend functionality and data-processing workflows using Java, Spring Boot, SQL, and REST APIs.	

- Implemented API integrations for transferring and processing application data between backend services and databases.
- Worked with relational databases and SQL queries for application data storage, retrieval, and processing.
- Debugged application and data-processing issues and optimized backend logic for reliable execution.

KEY PROJECTS

Cloud-Based Healthcare Data Pipeline

AWS S3 | Snowflake | Snowpipe | Streams | Python | SQL

- Designed an end-to-end ETL pipeline to ingest healthcare data from Amazon S3 into Snowflake.
- Automated data ingestion using Snowpipe and implemented Streams for change-data-capture (CDC) workflows.
- Processed and transformed structured datasets (CSV, JSON) using SQL and Python for downstream analytics.

Customer & Device Identity Matching Pipeline

Python | SQL | PySpark | Databricks | AWS S3 | AWS Glue

- Designed data-processing workflows to analyze relationships across multiple customer and device identifiers.
- Implemented deterministic matching logic to identify records sharing reliable identifiers and unify related entities.
- Used Python, SQL, PySpark, and Databricks to ingest, clean, transform, and validate large structured and semi-structured datasets.

Evergreen Trading — Data Processing & Integration

Python | SQL | AWS S3 | REST API

- Built data-processing workflows for ingesting and transforming structured and semi-structured business datasets.
- Applied validation and transformation logic to improve data quality and consistency, integrating processing with downstream application workflows.

ERP School Management System

Java | Spring Boot | PostgreSQL | React.js | REST APIs

- Developed backend functionality using Spring Boot with PostgreSQL for application data management, reducing processing time by 25%.
- Built REST APIs for communication between frontend and backend, and developed the UI using React.js, HTML, CSS, and JavaScript.

Large-Scale Dataset Integration Project

Python | SQL | PySpark | AWS | Data Integration

- Worked on data-engineering workflows for processing and integrating large structured and semi-structured datasets across multiple sources.
- Analyzed source data and record relationships to design ingestion, transformation, validation, and processing steps for downstream use.
- Used Python, SQL, and distributed processing concepts to build reliable, reusable data-integration workflows.

CERTIFICATIONS

- Certificate in C Language — AICPE
- Certificate in Cloud Computing and DBMS — NPTEL
- Certificate in AWS — Internshala
